For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance (including the effects of sales charges, loads and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. Morningstar provides adjusted historical returns and an Extended Performance Rating for mutual funds with multiple share classes (where at least one class has three years of history). This means that any share class that doesn't have a 3-, 5-, or 10-year performance history may receive a hypothetical Morningstar Rating based on the oldest surviving share class of the fund. Morningstar first takes the performance of the initial share class for the prior periods and adjust those returns for any difference in fee structure. Next, the Extended Performance Rating is determined by comparing the adjusted-historical returns to the current investment universe to identify placement in the bell curve used to assign the Morningstar Rating. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. (Each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages.) The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-year and five-year Morningstar Rating metrics, which are based on a risk-adjusted return.

¹ The MyDestination Funds ("Funds") attempt to achieve their objectives by investing in the GuideStone Select Funds. The Funds are managed to a retirement date ("target date") by adjusting the percentage of fixed income securities and equity securities to become more conservative each year until reaching the retirement year and then approximately 15 years thereafter. The target date in the name of the Funds is the approximate date when an investor plans to start withdrawing money. By investing in the Funds you will also incur the expenses and risks of the underlying Select Funds. The principal risks of the Funds will change depending on the asset mix of the Select Funds in which they invest. You may directly invest in the Select Funds. The Funds' value will go up and down in response to changes in the share prices of the investments that they own. The amount invested in the Fund is not guaranteed to increase, is not guaranteed against loss, nor is the amount of the original investment guaranteed at the target date. It is possible to lose money by investing in the Funds.

² Target Risk Funds ("Funds") attempt to achieve their objectives by investing in the GuideStone Select Funds. By investing in the Funds you will also incur the expenses and risks of the underlying Select Funds. The principal risks of the Funds will change depending on the asset mix of the Select Funds in which they invest. You may directly invest in the Select Funds. The Funds' value will go up and down in response to changes in the share prices of the investments that they own. It is possible to lose money by investing in the Funds.

³ The bonds held by the bond funds are subject to interest rate risk. Values of existing bonds generally fall when interest rates rise.

⁴ The fund invests substantial assets in real estate investment trusts (REITs) that involve risks not associated with investing in stocks. Risks include declines in the value of real estate, general economic conditions, changes in the value of the underlying property and defaults by borrowers. The value of assets in the real estate industry may go through cycles of relative underperformance and outperformance in comparison to equity securities markets in general.

⁵ Foreign securities involve risk from adverse changes in currency exchange rates. Securities of emerging countries may involve additional risks including price volatility, reduced liquidity, lax financial reporting requirements as well as political and economic instability.

⁶ The Fund's volatility may be amplified by its use of short sales and derivatives. Short sales by a fund theoretically involve unlimited loss potential since the market price of securities sold short may continuously increase. Leverage may increase the risk of loss and cause fluctuations in the market value of the Fund's portfolio to have disproportionately large effects or cause the NAV of the Fund generally to decline faster than it would otherwise.

⁷ Convertible bonds are subject to interest rate risk, meaning values of existing bonds generally fall when interest rates rise. They also may decrease in value when the underlying common stock decreases in value.

⁸ The fund invests in high yield securities, commonly known as "junk bonds." While offering higher currency yields, these securities generally are considered speculative and are subject to greater default and liquidity risks than higher-rated bonds.

⁹ There is a risk that value-oriented investments may not perform as well as the rest of the U.S. stock market as a whole.

¹⁰ Small company stocks are generally riskier than large company stocks due to greater volatility and less liquidity.
